Integrating Orthopedic Assessment & Treatment Neck, Shoulder, Low Back & Knee Injuries

Join Dr. Ben Benjamin for his **new, hands-on workshop which includes injury assessment and friction therapy treatment**. At each full-day training, you will learn two dozen assessment tests, as well as cross-fiber friction, and myofascial and deep tissue techniques to address pain and injury in some of the most commonly injured structures in the neck, shoulder, low back, and knee.

You will also learn the anatomy of these structures as never before through physically locating and **palpating each targeted muscle, tendon, and ligament** with these techniques. This new workshop gives you a **comprehensive view of working with these injuries from initial assessment to treatment**.

Learn **ASSESSMENT TESTING** and **HANDS-ON TREATMENT**
for the most commonly injured structures in the following:

THE NECK

Injuries to these structures can create headache-like pain as well as referred pain into the arms, hands, upper back and chest.

THE SHOULDER

Injuries to these structures can refer pain into the axilla, upper arm, and forearm.

THE LOW BACK

Injuries to these structures can show themselves as low back pain as well as referred pain into the abdomen, hip, thigh, lower leg and foot.

THE KNEE

The most commonly injured ligaments in this area cause debilitating knee pain and swelling - and many practitioners have never heard of them.
